

TALISON CGP2 LITHIUM PROCESSING PLANT

CLIENT MSP Engineering
LOCATION Greenbushes, Western Australia

Rising to the challenge

- Efficiencies were increased through integrating our Modelers into the client project office, effectively eliminating the technical query process.
- Additional resources were allocated to accelerate the project to meet extremely tight time frames.
- The model was colour coded to satisfy client requirements and track progress and holds.
- Models were split into multiple phases to allow fabrication to commence early and meet delivery dates.
- To further assist our client, we prioritised and released erection sequence packages for early site engagement.
